

### PoE Switch Quick Installation Guide

#### 1. Quick Reference

#### LED INDICATOR

LED	Port Indicators	Description
Power	Green (Solid)	Device powered on
	Off	Device powered off
PoE	Amber (Solid)	A PoE device is connected
	Off	No PoE device is connected or the device is turned off
LINK/ACT	Green (Solid)	Connected (No data transmission)
	Green (Blinking)	Transmitting/receiving data
	Off	No device is connected or the device is turned off

**Note :** The maximum amount of PoE power available is 30 Watts per port . If a power overload occurs, the switch will distribute power on a first-come, first-served basis until reaching its power budget.

### PoE Mode

Mode	Function	Explanation
N = Default	Standard	All ports free communication, suitable for common data transmission environment.
V = VLAN	Port Isolation	In this mode, the 8 POE ports are isolated from each other, and can only communicate with uplink ports. This will effectively reduce chances of network security attacks.
S = Super	Enhanced Supply	Optimize the distance for POE transmission up to 250m by limiting the downward bandwidth.
